

## **DKT7++, DKT7M++ and DKT7 WFM Release Notes**

**Software Version:** 2017-11-08

### **About this document**

This document contains release notes for the above mentioned software version for DK T7++ covering all DK T7 models.

The software/firmware update introduces important changes to the internal structure of the units and is recommended for all units in order to improve their performance and stability. All existing setups are preserved from update with ID23 dated 2016-02-17. Software releases with earlier dates will be forced to perform a factory update.

**The update is recommended and is only available through the online updater.**

### **MADI Support**

The input firmware to the SD input is updated enabling the serial data stream to interpret as a MADI stream. Up to 64 channels is supported at 48 kHz sample rate. The enhancement is optional and requires a separate license key.

### **ATMOS and Object Orientated Surround Sound**

A new surround sound tool for Dolby ATMOS workstation is included. Total loudness reading is available. The enhancement is optional and requires a separate license key and is described in its own documentation.

### **Super Starfish included in ATMOS Option**

The Super Starfish is a new way to look at surround signals providing a unified presentation of the signal independent of the number of channels used. The source signals can be AES, MADI or SDI. The module is a standard part of the ATMOS option.

### **MSD100C Mode**

The same MSD100C as it has always been. Upgraded with the same outstanding touch screen as the DK T7++, you will not miss a single step with the new MSD100C T7

### **Updated Font Generator**

### **HDMI Output**

### **Extended Loudness Capture Range**

**Peak Hold Time Setting**

**New Loudness Presets**

**Enhanced Waveform Capture**

**Additional Readout Lines**

**Ready for the Future**
